### Activities at Home

[Look through old photo albums and videos](#)

[Start a journal](#)

[Build a Fort](#)

[Play Charades](#)

[Foster a pet through a local Animal Shelter](#)

[Rearrange your room](#)

[Create an obstacle course](#)

[Create a Scavenger Hunt](#)

**Numbers League:** In the Numbers League, only math can save the day. You'll use everything from addition to negative numbers to assemble a team of superheroes and capture a horde of villains.

**CoolMath4Kids:** Cool4Math is a great resource for kids who love playing games. It combines education with gaming, to deliver extra mathematical fun.

**Fun Brain:** Funbrain is sorted by grade type, it's for kids in grades pre-k through 8th grade. It has every mathematical resource your kids need.

**Code.org:** No one is too young (or old, I might add) to code. Learn how to build an iPhone game, write your first computer program, draw in JavaScript and much more.

**Exploratorium:** The website of the San Francisco-based Exploratorium is jam-packed with interactive activities, videos, apps, links and more.

**Extreme Science:** Here you'll find wild and weird facts about nature, resources for science projects and info on all kinds of world records.

**Museum of Science + Industry Chicago Online Science:** Apps and activities and videos, oh my! Play games, watch baby chicks hatching, create virtual chemical reactions or use forensic science to analyze different types of candy.

**Science Channel:** Question everything. Along with a rundown on the Science Channel's TV programs, this website has plenty of videos, quizzes, games and the latest science news.

**STEM-Works:** In addition to articles and job information, STEM-Works has stocked their site with interesting [activities](#). Test your skills in the

Paint Kindness Rocks, and place them on neighbors steps

Start a puzzle

Learn a new language

Create a Bear Hunt in the neighborhood asking others to put bears in their windows.

### Science Games and Apps

**Angry Birds Space App:** Those wacky (and wildly successful) birds are now playing their physics puzzles in space, where gravity does some pretty strange things!

**Geo Walk: 3D World Factbook App:** Geography nuts rejoice! This educational app contains pictures and facts on hundreds of places, plants, and animals.

**Kinetic City:** An amazing collection of science experiments, games, activities and challenges. You might choose to run the blood cell relay race or use a computer model to build your own interstellar slush business.

**Chicago Museum of Science and Industry – Experiment:** Experience and learn science through interactive mobile apps and get hand-on science activities you can try at home.

reptile quiz. Rescue an athlete in the Bionic Games. Or, simply follow the path of great whites with the Global Shark Tracker.

**Tynker:** A computing platform that allows children to develop programming skills through fun, creative courses. Join the millions of kids from around the country learning to code with Tynker!

**Khan Academy:** Khan Academy breaks down complex topics on a range of subjects including programming, math, and statistics! It has learning resources in almost all STEM subjects K-12.

### STEM Fun for Middle School Kids

**The Big Brain Theory – Discovery Channel:** Competitors on this TV show have just 30 minutes to come up with a solution to an (seemingly) impossible engineering challenge.

**Bill Nye the Science Guy:** Bill's entertaining television episodes cover everything from comets to the science of music. Have some fun with his [home demos](#).

**Kids Ahead:** A STEM bonanza. Kids Ahead is packed with all kinds of resources, including scavenger hunts, videos, articles, links to local activities and fun events and info on cool jobs that inspire and excite.

**Science Bob:** Bob is a science teacher who loves to experiment (often on Jimmy Kimmel). His website has videos, links and plenty of ideas for build-your-own experiments and science fair projects.
